

Are there silica dust warning signs clearly displayed around your workspace?

Have you been fit tested and trained in the use and maintenance of Respiratory Protective Equipment?

Have you set up a rotation to limit exposure times?

Do you have adequate ventilation?

Are you working in an enclosed space? Is your local exhaust ventilation and ventilation hood on?

Are you using water suppression techniques on your tools?

Are you regularly wet sweeping your workspace?

Packing up? Have you cleaned your workspace with an industrial High Efficiency Particulate Air (HEPA) Absorber Vacuum?

Heading home? Have you changed out of your silica contaminated work clothes and showered if possible?

Have you submitted your work clothes for laundering on site or dampened and contained your clothes for washing at home in a plastic bag?

Get home safely!
